

Use the drawing below to determine if you have a 30 degree angle bay window. Cut out the shape, fold as needed and place in the corners of your bay window to see if it matches.

Typically the walls in a home are not really straight lines in the corners because of the spackle, so the pattern may not be an exact match. It may help to place a straight stick (a ruler or yardstick) on either side of the corner to make it easier to see the angle of your walls.

30 Degree Bay Window
